

*Dear Sir,

1 [You need to get real on saying Yucca Mountain is safe. Neptunium-237 takes 2.2 million years to become inert. Plutonium-242 takes 376,000 years to become inert. Technetium-99 takes 212,000 years to become inert. Thorium-230 takes 80,000 years to become inert. Plutonium-239 takes 24,000 years to become inert. And Radium-226 takes 1,600 years to become inert-How about finding a way to ship the nuclear waste to the BACK SIDE OF THE MOON which never ever faces the earth and think about Human health and safety for a change. THINK you morans!]
